System

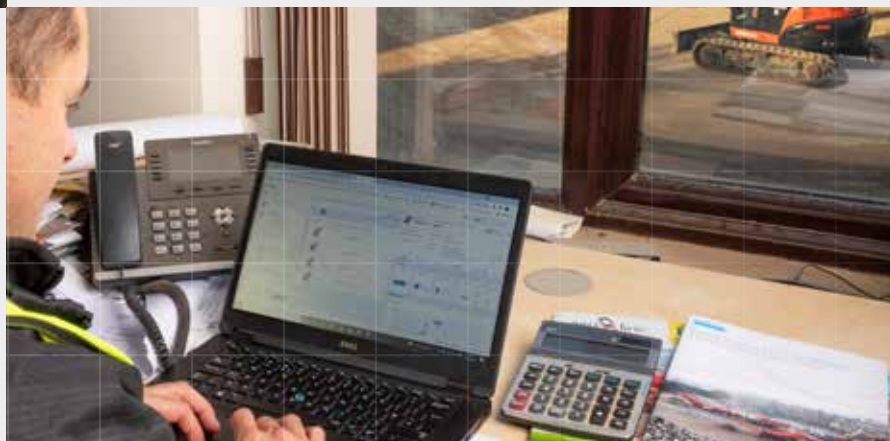

INSTANT INFORMATION.
ALL THE TIME. ANYWHERE.

INSTANT INFORMATION. ALL THE TIME. ANYWHERE.

Kubota Tracking System is the smarter and easier way to stay informed about your Kubota excavators. Anywhere. Anytime. From any PC, laptop, tablet or smartphone. Kubota's real-time telematics not only helps you to assess your fleet's operational performance, it can also improve security, make it easier to minimise downtime and plan maintenance for maximised productivity.

**Now available on Kubota excavators:
KX085-5 / KX060-5 / U56-5 / U50-5 / KX042-4α. AEMP API enabled.**

MANAGE YOUR FLEET EFFICIENTLY

Manage your fleet easily and remotely with the user-friendly Kubota Tracking System portal. View real-time performance and location data with machine telematics connected directly to your PC, laptop, tablet or smartphone. From planning fleet movements to real time information on every machine, the portal helps you to stay informed about operating conditions, alert status, location and maintenance control.

ENHANCE SECURITY TRACKING FOR EVERY MACHINE LOCATION

Instantly view the location of your fleet with GPS tracking to manage the movement of every excavator. Protect against theft with a Geofencing alert feature that provides instant notification when your vehicle is outside its authorised working area.

INCREASE PRODUCTIVITY OF EVERY MACHINE

Review and analyse the real-time performance status of each excavator including operating hours, GPS location, work rate data, DPF regeneration history, water & oil temperatures, and fuel consumption.

MINIMISE DOWNTIME WITH INFORMED MAINTENANCE

Quickly detect machine errors with real-time alerts, to enable fast response and reduce downtime.

One solution for integration – Kubota Tracking System AEMP API

The Kubota Tracking System AEMP API provides a web API that allows easy use of owned vehicle information in a variety of systems and applications using a single, unified method. It is an API service which links the location information and operation information of vehicles that are connected to the "Kubota Tracking System" telematics service provided by Kubota. The API links this information in a form that conforms to the provisions of AEMP 2.0
