# A VISIT TO TKD

The TDK exhibition takes place every two years. The demonstration area makes this event very attractive. This year, one of the main targets was the security. This is the reason why the exhibition, this year, was much more structured. It means the TKD is ready to become a major construction fair. The trend in the Dutch market is more and more on ZTS machines. All exhibited machines had high specifications and specific options to this country (AUX. 1 and 2, hydraulic quick coupler, safety and comfort for the operator).

Our distributor in the Netherlands, MEERMAN MACHINES BV, had a very large stand, well designed, probably the best stand of the show!

The total surface of the stand was 2400 m<sup>2</sup> and 28 KUBOTA machines were exhibited.

The test area was very large and allowed visitors to try our machines.

The compact wheel loaders and the tracked dumpers arouse more and more interest from visitors who have appreciated the new KUBOTA KC-4 series and RT series.

The whole range of KUBOTA hydraulic breakers was also highlighted on the stand of MEERMAN MACHINES BV.
